# Team Contract

*Disclaimer*: I am completing my senior design project solo. Consequently, the standard "rules" of a contract don't directly apply to my project. I've done my best to adapt them to my specific circumstances.

Team Members: Jeremy Oosterbaan (oosterjm@mail.uc.edu)

Faculty Advisor: Isaac Rose (isaac.rose@pe-ltd.com)

Meeting Plan: Brief meetings will be held at the start of each day (stand-ups). Additionally, periodically, demos will display chunks of progress on Friday afternoons. Performance Electronics is a small enough environment that collaboration/communication between myself & my supervisor Isaac will occur daily.

Project Focus & Breakdown: Again, as I will be completing this project solo, there isn't much of a separation of work across various team members. Isaac's biggest role throughout the entire project will be to oversee my work and jointly design the architecture. Much of the communication protocol is going to be implemented both in the mobile & embedded worlds. Thus, we'll collaborate equally on much of the design aspect of the architecture. As for implementing the architecture itself, I'll handle all of that individually.
